

A collaboration health monitor For student teams

Problem → Group projects fail from poor coordination, unequal effort, and communication breakdowns.

Solution → A live health score that makes those invisible problems visible before they become disasters.

Seedhe Code | Track: EDU-04 | Built with HTML, CSS, Vanilla JS

CodeQuest
2026

Every student has lived this:

- You don't know who's actually doing the work until the deadline arrives
- One teammate does 70% of it, everyone gets the same grade
- Someone's stuck for three days and says nothing until it's too late

Existing tools (**Trello, Slack, Google Docs**) are **information storage**, not **problem detection**. They show you tasks. They don't tell you the team is quietly falling apart.

That gap between "**seeing the work**" and "**seeing the team**" is what we built **TeamPulse** to close.

Most tools answer: “What work exists?”

TeamPulse answers: “Is this team okay?”

We built a live, composite **Team Health Score** the first number a team sees, calculated automatically from real usage:

Team Health = f(completion %, fairness, overdue tasks, blocked tasks)

On top of it sits a **Risk Engine** that translates raw signals into plain language:

"  *HIGH RISK — 3 overdue tasks, contribution imbalance detected* "

It's not a dashboard you have to interpret. It's a diagnosis you can act on immediately which is the difference between a task manager and a health monitor.

How TeamPulse Fits the Problem Statement ?

Problem Statement:

Teamwork remains difficult due to poor **coordination**, **unequal effort**, and **communication issues**.

Goal: Improve **collaboration** and **accountability**.

Root Cause	Features	Solves it by
Coordination	Task Board	One shared board, one status, no guessing
	Deadline Countdown	Same visible deadline for everyone
	Activity Feed	Timestamped log
Unequal Efforts	Fairness Score	Turns "I'm doing everything" into a number
	Workload Distribution	Bar view makes imbalance undeniable
	Below-average Nudge	Names who's behind, before resentment builds

How TeamPulse Fits the Problem Statement ?

Problem Statement:

Teamwork remains difficult due to poor **coordination**, **unequal effort**, and **communication issues**.

Goal: Improve **collaboration** and **accountability**.

Root Cause	Features	Solves it by
Communication	Blocker Flag	One tap instead of an awkward confession
	"Someone Is Stuck"	Surfaces blockers automatically, team-wide
	Inactive Detection	Flags silence using real activity, not guesswork
Accountability	Team Health	ScoreOne number = completion + fairness + risk
	Risk Indicator	Says <i>why</i> it's at risk, not just that it is

Task Board

“One Board, one truth”

Why it matters: No more three different versions of "who's doing what" living in someone's head, a group chat, and a forgotten doc.

Relatable line: *"Wait, I thought you were doing that."* - said by every group project ever.

Deadline Countdown

“The clock everyone can see”

Why it matters: A shared countdown removes the excuse of "I didn't realize it was due so soon" - the pressure is visible to all, not just the one person tracking it.

Relatable line: Nobody should find out the deadline moved via a 11 PM message.

Activity Feed

“The memory the team doesn’t have to keep in their heads”

Why it matters: Every action is logged automatically no one has to ask "what happened while I was gone."

Relatable line: The group chat scrolls away. This doesn't.

Contribution Fairness Score

“Effort, measured, not felt”

Why it matters: Turns "I feel like I'm doing everything" from a complaint into a number everyone can look at together.

Relatable line: One teammate does 70% of the work. Everyone gets the same grade. Not anymore.

Workload Distribution

"The imbalance you can actually see."

Why it matters: A bar chart makes overload undeniable - no more arguing about who's "actually" busy.

Relatable line: A picture is worth a thousand "well, actually I've been busy too" arguments.

Contribution	Workload	Activity
Aditi		33%
Rohan		17%
Priya		17%
Karan		17%
Sneha		17%

Below “Team Average” Nudge

“A gentle nudge before it becomes a grudge.”

Why it matters: Catches imbalance early and names it kindly before resentment builds up in silence.

Relatable line: Sometimes people don't know they're behind until someone tells them.

SI

Sneha Iyer

Project Manager / QA

17% of work

0/2 tasks done

0%

Below team average

Sneha is at 0% while the team average is 45%.
Consider reassigning a task.

"I'm Stuck on This" Blocker Flag

"Asking for help shouldn't feel like a confession."

Why it matters: One tap replaces the awkward group-chat admission of "hey uh, I'm actually stuck."

Relatable line: Someone's stuck for three days and says nothing - until now, it only takes one tap to say something.

“Someone Is Stuck” Section

“Struggle shouldn’t need to be announced.”

Why it matters: Automatically surfaces blockers to the whole team no one has to notice on their own.

Relatable line: The team shouldn't find out someone was drowning only after the deadline passed.

⚠️ SOMEONE IS STUCK

Rohan

is stuck on “Write API for task CRUD operations”

Due 9 Jul

Inactive Member Detection

"Silence is a signal too."

Why it matters: Uses real activity, not guesswork, to catch a teammate who's quietly checked out.

Relatable line: Going quiet for three days shouldn't be invisible until it's a crisis.

Team Health Score

"One number. The whole truth."

Why it matters: Combines completion, fairness, overdue, and blocked tasks into a single honest reading of how the team's actually doing.

Relatable line: Not "how's it going?" - an actual answer.

Project Risk Indicator

"Not just a warning. A reason."

Why it matters: Tells the team *why* it's at risk - overdue tasks, imbalance, blockers - so they know exactly what to fix, not just that something's wrong.

Relatable line: "Something feels off" becomes "here's exactly what's off, and here's what to do about it."

• Every tool in this space Trello, Asana, Monday, Notion is built around the same question: **"What work exists, and what's the status of each piece?"** That's task management. It's a solved problem, and these tools solve it well.

• TeamPulse is built around a different question: **"Is this team actually functioning?"** That's not a task management problem it's a diagnostic problem, and nothing in the current market answers it.

	Trello/Asana /Monday	Slack/ Discord	Google Docs/ Sheets	TeamPulse
Track tasks & status	✓	✗	! manual	✓
Measure contribution fairness	✗	✗	✗	✓
Detect a teammate going silent	✗	✗	✗	✓
Proactive risk warning with reasons	✗	✗	✗	✓
One composite "team health" score	✗	✗	✗	✓
Built for student team dynamics specifically	✗	✗	✗	✓

Why It's Hard to Copy ?

Not a feature. A model.

Anyone can ship a "flag as blocked" button in an afternoon.

What's hard to copy: a live scoring model tuned for how *student teams* actually fail silent disengagement, uneven effort, last-minute panic not how corporate teams fail.

That's the moat: purpose-built diagnosis, not a UI trick.
